

The Technancial Company's
JANUS Risk Manager
awarded the
Best New Product, Risk Management

at the FOW and Global Investor Asia Capital Market Awards 2018, September 20th, 2018

The Technancial Company's JANUS Risk Manager (JRM) was the unanimous winner of this category, chosen by the panel of industry expert judges, with some of the feedback being: "This system is really focused on what is today the main concern of the industry: trade monitoring, compliance and trade surveillance. This tool brings a missing piece from front to back, especially in the space of SDMA flow that has always been a challenge to monitor due to the high frequency of trading and the little (to no) access from brokers to these infrastructures."

JANUS Risk Manager is the multi-asset, multi-currency and multi-market real-time risk management, transaction monitoring and surveillance system, with a flexible rules-based validation system supporting the majority of financial instruments in one single application.

During the judging period, JRM was successfully deployed with two major Asian brokerage houses, with different objectives, using the identical product out of the box.

JRM monitors the dark, distant and often invisible areas of professional high-volume traders, illustrating the exceptions in a meaningful way – exceptions that are real, that once discovered save the client (literally) and highlight the 'hard to see' gaps in the limit controls that other systems have in place but cannot control once orders and trades are in place.

As a company focused on flexible tools for regulatory compliance, The Technancial Company has continued to invest heavily in this real time platform, that now includes historical behavioural analytics, enabling users to see not just breaches, but also details of checks leading up to them.

Mirko Marcadella, Global Head of Business Development, said: "We are really proud to have won this award. With more and more firms recognising that a solid, reliable, flexible and open Risk Management System is essential in supporting their business needs, it pleases us to know that our continued investment in the platform's capabilities has been recognised by derivatives industry experts."

Presented at a gala dinner in Singapore last night, this award is seen as a credit to the efforts of the multinational team of software engineers and support staff that reflects the company's global vision.
